Java

```java
class Solution {
    public int countDivisibleSubstrings(String word) {

    }
}
```

JavaScript

```javascript
/**
 * @param {string} word
 * @return {number}
 */
var countDivisibleSubstrings = function(word) {

};
```

TypeScript

```typescript
function countDivisibleSubstrings(word: string): number {

};
```

C++

```cpp
class Solution {
public:
```

```
    int countDivisibleSubstrings(string word) {

    }
};
```

C#

```
public class Solution {
    public int CountDivisibleSubstrings(string word) {

    }
}
```

Kotlin

```
class Solution {
    fun countDivisibleSubstrings(word: String): Int {

    }
}
```
